Telmitor 40 Tablets

Telmisartan is an angiotensin II receptor antagonist (ARB) used to manage hypertension. Generally, angiotensin II receptor blockers (ARBs) such as Telmisartan bind to the angiotensin II type 1 (AT1) receptors with high affinity, causing inhibition of the action of angiotensin II on vascular smooth muscle, ultimately leading to a reduction in arterial blood pressure. Recent studies suggest that Telmisartan may also have PPAR-gamma agonistic properties that could potentially confer beneficial metabolic effects.

Dosage Form

Tablet

Route of Administration

Oral

Composition

Each uncoated tablet contains:

- Telmisartan I.P. 40 mg
- Excipients q.s.

Indications

Indicated alone or in combination with other antihypertensive medicines for the treatment of hypertension. It may also be used in hypertensive patients with type 2 diabetes mellitus and diabetic nephropathy, and in selected patients with congestive heart failure who cannot tolerate ACE inhibitors.

Storage

Store protected from light and moisture.

Precautions

Discontinue telmisartan as soon as pregnancy is detected, as use during pregnancy may cause serious harm to the developing fetus. Use only as directed by the physician.

Presentation

20 x 10 tablets
