

Azetor-200

Azetor-200 Suspension contains Azithromycin, an azalide, a macrolide antibiotic. It is one of the world's best-selling antibiotics. It is derived from erythromycin, with a methyl-substituted nitrogen atom incorporated into the lactone ring, thus making the lactone ring 15-membered.

Dosage Form

Suspension

Route of Administration

Oral

Composition

Each 5 ml contains:

- Azithromycin Dihydrate 200 mg
- Equivalent to Azithromycin Anhydrous

Indications

Azithromycin is used to treat bacterial infections such as respiratory infections, skin infections, ear infections, and sexually transmitted diseases.

Storage

Keep in a cool & dry place. Protect from direct sunlight.

Precautions

- Contraindicated in patients with hypersensitivity to azithromycin, other macrolide antibiotics, or any of the excipients.
