

Neuromack Injection

Neuromack injection is a collection of vitamins that form the group of B vitamins which acts as an energy booster. These vitamins are all water-soluble which means that they can be easily transported around the body. The digestive system, stomach acids and enzymes attack the molecular structure of B vitamins when consumed in the form of tablets or gels. But in the case of injections, neither acids nor enzymes are able to attack the vitamins. This results in a higher rate of absorption and retention of B vitamins with faster and more effective results.

Dosage Form

Injection

Route of Administration

Parenteral

Composition

Each 3 ml contains:

- Thiamine Hydrochloride 100 mg
- Pyridoxine Hydrochloride 100 mg
- Cyanocobalamin 1000 mcg
- Nicotinamide 100 mg
