

Ketomac Plus Cream 15gm

Ketomac-Plus Cream combines Ketoconazole and Beclomethasone Dipropionate to treat fungal skin infections along with the redness, swelling, and itching that often accompany them.

Dosage Form

Cream

Route of Administration

Topical

Composition

- Ketoconazole I.P. 2.0% w/w
- Beclomethasone Dipropionate I.P. 0.025% w/w

Indications

Indicated for dermatophyte infections (tinea corporis, tinea cruris, tinea pedis), cutaneous candidiasis, seborrheic dermatitis, and pityriasis versicolor (tinea versicolor).

Storage

Keep in a cool place, protected from light. Do not freeze. For external use only.

Precautions

Avoid covering treated areas with tight-fitting, synthetic clothing that restricts air circulation. When treating the feet, wear clean cotton socks and breathable footwear, and keep the feet dry. Do not use other medicated skin products unless prescribed by a physician.

Presentation

15 gm cream in a lami tube
