

Pantomac Dry Injection 40mg

Pantomac Dry Injection contains Pantoprazole Sodium, a proton pump inhibitor (PPI) that reduces gastric acid secretion by inhibiting the proton pump in gastric parietal cells. It is indicated for the treatment of moderate and severe reflux esophagitis.

Dosage Form

Injection

Route of Administration

Intravenous (IV)

Composition

Part I: Each vial contains:

- Pantoprazole Sodium I.P. 40 mg
- Equivalent to Pantoprazole

Part II:

- Sodium Chloride I.P. 10 ml

Indications

Indicated for the treatment of moderate and severe reflux esophagitis.

Storage

Store in a cool place. Protect from direct sunlight.

Precautions

For intravenous administration only. Reconstitute the vial with 10 ml of Sodium Chloride Injection BP 0.9% w/v before use. Administer intravenously over 2 to 15 minutes as a slow injection or further dilute with 100 ml of Sodium Chloride Injection BP 0.9% w/v or 5% Glucose Injection for short-term infusion. Use the reconstituted solution within 12 hours of preparation.

Presentation

36X10X40MG
